Why Wait Four Weeks for Metal Edge and Astragal Sets?

National Guard Products recently completed a new production cell dedicated to the manufacturing of metal edges and astragal sets.

Featuring a custom, state of the art astragal prep station, this new production cell will dramatically increase manufacturing capabilities while decreasing lead time for customers.

Designed and built by NGP engineers, the astragal prep station is capable of efficiently punching mortise lock, cylindrical lock, ASA-strike, T-strike, standard flush bolt, and automatic flush bolt preps with just a rotation of the machine.

Just fill out the metal edge and astragal order form found on page G51 of the NGP catalog and we will take care of the rest. You can feel confident that your order is in good hands and will be produced accurately in two weeks, or less.

Metal Edge and Astragal sets are most commonly used on wood doors. They serve a dual purpose – both protecting the edge of the door from damage as well as helping certain wood meet fire door specifications .

A Message from NGP

Dear Friends

During these uncertain and volatile times, it's good to know there is one rock solid thing you can count on: National Guard Products and our continued commitment to you, our customers, to provide top quality gasketing, thresholds and lite/louver kits with friendly, competent and conscientious customer service, day after day. After all, at the end of the day it's the only thing we really have control over, and we'll give it our best shot.

Have a great year.

Chuck Smith
President

Price Change on Firelite

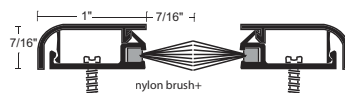

Price volatility on the Firelite™ line of glass has made it necessary for us to withdraw our published list prices, effective March 1, 2009.

Please consult us for a quote on all Firelite™ glass products.

Please note this on page 22 of our July 1, 2008 Lite and Louver price list.
